

Expedition roof rack and ladder: The neat ladder provides access to the heavy-duty roof rack, which features additional reinforcement in order to cope with the abundant food, diesel, water and mosquito nets that are carried

Hella spotlights: four high-power Xenon spots are mounted on the roof rack, complementing the standard Disco 4 lights to provide exceptional illumination

Rear lamp guards: effective protection for the Discovery's sophisticated and large tail light clusters

Tow ball/jaw unit: whether it's towing a heavy trailer or performing a vehicle recovery, this heavy-duty 3 500kg-rated unit is an essential piece of kit

Additional equipment and accessories fitted:

- Flexi Shield protection film: Kingsley's Discovery 4 is covered top-to-toe in clear polyurethane film to limit bodywork damage and scratches. Ross's vehicle isn't, so it will be interesting to see the difference when they return
- Melvill & Moon seat covers: personalised for Kingsley, Gill (Mashozi), Ross and Anna, to provide customised additional seat protection, durability and packing versatility
- Rigid loadspace protector: fits between the luggage compartment and rear seats, making it possible to pack safely to roof-height at the back, and cable-tie accessories such as fire extinguishers for easy access in front
- Rubber mat set: durable mats to save the carpets
- and the luggage compartment – must-haves for any off-roading
- Motorola CM140 two-way radio: reliable communications is key to the success of any expedition. The crew vehicles are fitted with the CM140, supplied and fitted by LA Radio, which provides up to 10 channels
- Dual-battery system: vital for ensuring reliable power for all the accessories, particularly essential items such as fridges

All accessories fitted are original equipment (OE) or Land Rover-approved items. The expedition vehicles were specially prepared by Land Rover South Africa under the direction of Rory Beattie, LRSA's automotive diagnostic specialist.
